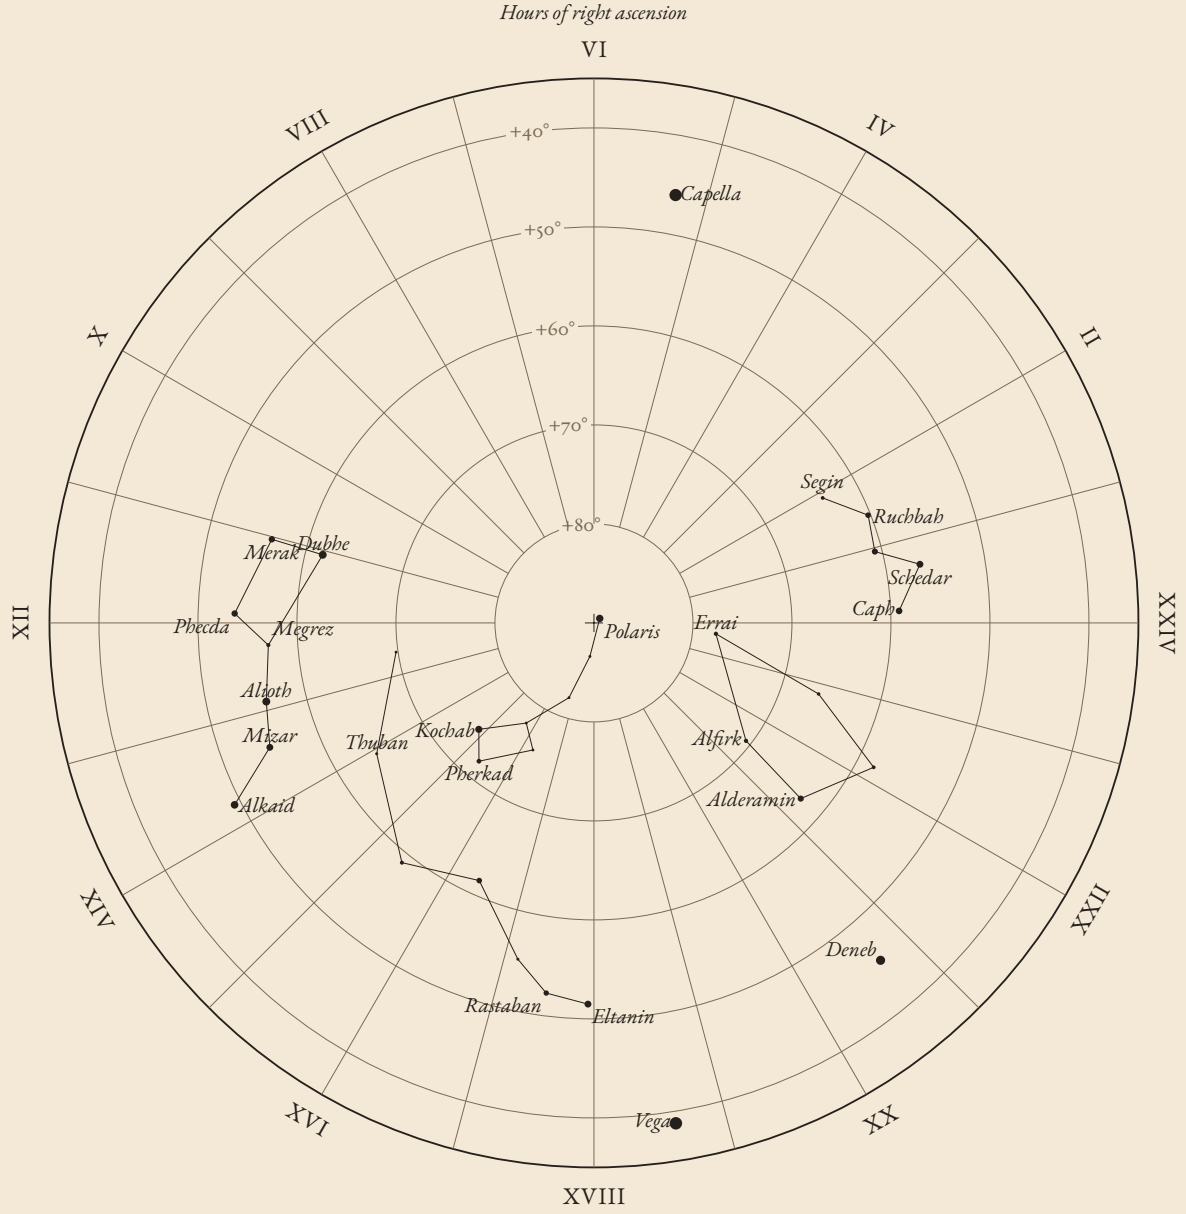
Plate IV

The Circumpolar Stars

as seen from latitude 52° north; the pole at the centre



1st mag. 2nd 3rd 4th 5th

Positions are rounded epoch-2000 coordinates of thirty-four naked-eye stars. Every star, grid line, and label is placed by one macro that converts right ascension and declination to polar coordinates, so the same source can be re-centred, re-limited, or extended with further stars without redrawing.
